

## Making a 'snail' for planting early start seeds indoors

**1**

Heavy Paper or Cardboard 4-6" deep, 8-12" long, pre-roll the cardboard

**2**

Place premoistened potting soil onto the paper/ cardboard,

**3**

Shape the soil into a rectangle to the edges of your paper/ cardboard, pat firmly,

**4**

Place seeds appropriate depth from the top edge (Pictured: Calendula), don't plant the last 2 inches, remove soil

**5**

Carefully roll up tight enough to keep the soil in place, use your hand to help contain soil. Expect the soil to shift toward the end of the paper. Secure with an elastic band. Place rolls in a container with a slightly raised edge to keep upright. **LABEL**
